

INDEPENDENT ENERGY MANAGEMENT MODEL THE CONSUMER DOES NOT MAKE INVESTMENT

An Energy Manager makes the investment in the solar plant, agreeing with the Energy Consumer a contract in which the kWh price is fixed with a discount on the tariff.

This direct discount on the invoice contracted with the electric company in all the energy consumed that is produced through the solar installation allows the client to not make any investment, only acquiring the commitment to give the space to locate the installation and sign a contract of Consumption of energy during a period, PPA model.

There is also the possibility to or a fix a Price throughout the contract period.

After the PPA commitment, the solar installation becomes the property of the consumer, benefiting entirely from the energy generated by the solar plant.

The commitment period is usually 15 years:

The benefit to the consumer is the best price of energy purchase without making investments.

The benefit to the Investor is the profitability obtained with a captive client.
