

HANGAR POWER PLANTS THE FARMER RECIVES A HANGAR

The portfolio consists of multiples farm hangars projects. The agreement with the landowner is to build a farm hangar with a solar PV plant on its roof that the farmer will be able to use and exploit during the life-time of the PV plant

A long-term lease of 30 years will be signed in the presence of a public notary over the corresponding plot of land. The landowner has the right to use the hangar during the leasing period and will become the owner of the plant (including the building) after the lease period.

Each project is based on a standard building and on a standard PV configuration to simplify both construction and maintenance phase. The development of the projects has also been done to simplify the administrative review of the projects.
